REVIEW ARTICLE

- Factors associated with sarcopenic obesity in Brazilian adults and older people: Systematic review and meta-analysis of observational studies
NS Guimarães et al. 661

ORIGINAL ARTICLES

EPIDEMIOLOGY, CLINICAL PRACTICE AND HEALTH

- Association of sleep traits with benign prostatic hyperplasia in middle-aged and elderly men: A prospective analysis in UK Biobank
Y Wu et al. 675

- Associations of upper- and lower-limb muscle strength, mass, and quality with health-related quality of life in community-dwelling older adults
JP da Costa Pereira et al. 683

- Improvement in gait velocity variability after cerebrospinal fluid elimination and its relationship to clinical symptoms in patients with idiopathic normal pressure hydrocephalus
T Yamamoto et al. 693

- Association between milk consumption in middle age and frailty in later life: The Aichi Workers' cohort study
YJ Hong et al. 700

- Oral status of older adults receiving home medical care: A cross-sectional study
K Tanaka et al. 706

- Association between sarcopenia at discharge and functional outcomes 1 month and 6 months after discharge in patients in convalescent rehabilitation wards
K Miura et al. 715

BEHAVIORAL AND SOCIAL SCIENCES

- Does work after retirement affect health-related quality of life: Evidence from a propensity score matching study in China
Y Wang et al. 722

- Association between postoperative hyperactive delirium and major complications in elderly patients undergoing emergency hip fracture surgery: A large-scale cohort study
M Sun et al. 730

LETTERS TO THE EDITOR

CASE REPORTS

- Case series of bradycardia, renal failure, atrioventricular nodal blockers, shock and hyperkalemia syndrome in patients with dementia
T Maruyama et al. 737

- Successful treatment with reduced oral steroid dosage in an 81-year-old woman with statin-induced anti-HMGCR immune-mediated necrotizing myopathy
S Kondo et al. 739

RESEARCH STUDIES

- Number of medicines taken correlates with renal function in older patients
S Nakayama et al. 742

COMMENTS

- Consideration of confounding factors in assessing the associations between physical parameters and glycated hemoglobin levels among older patients with diabetes mellitus
C-T Chao 743

- Reply to: Comments on "Association between subjective physical function and occurrence of new fractures in older adults: A retrospective cohort study"
S Sato et al. 744
